filter	avatar

## Computing – Year 1

### Me and my selfie!

How can we *edit* our photos to make them appear different?

To take *good quality* pictures we need to keep the camera *still* and *focus* carefully on the subject. If we don't, they could be blurry or not in focus.

We can *attach* different photos to one frame – to show some of our favourite things. We can add *text* to label them.

*Selfie*

a photograph that has been taken of yourself

*capture*

saving what is on the screen – screenshot, photo etc.

*edit*

making a change

*focus*

having a clear visual definition

*avatar*

a representation of the user – photo, character.
